2024 - 2025

تطوير المواقع والبرمجيات Laravel Framework الصف الثالث

Unit	21
Name	Laravel
Goals / Outcomes	➤ <u>Remembering</u> 1. Recall the fundamental concepts and components of the Laravel framework, including its key features, tools, and directory structure. 2. Identify the purposes of core Laravel tools such as Composer, Artisan, Blade templates, and Eloquent ORM. 3. List the basic commands and syntax used for setting up Laravel projects, routes, controllers, and views. ➤ <u>Understanding</u> 1. Explain how Laravel integrates with PHP and its role in web application development. 2. Describe the MVC architecture and how Laravel implements this pattern. 3. Understand the purpose and usage of Laravel's routing system, Blade templating engine, and Eloquent ORM for managing database interactions. 4. Explain how Laravel handles dependencies and simplifies development tasks using Composer and Artisan commands. ➤ <u>Applying</u> 1. Install and configure a Laravel project, including setting up a local development environment and managing dependencies. 2. Write and implement Laravel scripts to manage routes, controllers, and views, and handle HTTP requests. 3. Utilize Laravel's Blade templating engine to create dynamic, reusable views. 4. Develop and manage database schemas using Laravel migrations and seeders. 5. Implement CRUD operations using Eloquent models to interact with databases. ➤ <u>Analyzing</u> 1. Compare Laravel with other PHP frameworks in terms of features, functionality, and performance. 2. Analyze the benefits of using Laravel's routing, templating, and ORM systems for building scalable and maintainable applications. 3. Evaluate different methods for structuring code and organizing application components to enhance reusability and maintainability. 4. Assess the impact of using Laravel's tools (e.g., Composer, Artisan, Blade) on development efficiency and security. ➤ <u>Evaluating</u> 1. Evaluate the performance and efficiency of Laravel applications under different scenarios. 2. Judge the clarity, maintainability, and scalability of Laravel applications using best practices in coding and architecture. 3. Assess the robustness and security of Laravel applications, particularly in handling HTTP requests, data validation, and database interactions.

	➤ <u>Creating</u> 1. Develop complete web applications using Laravel, demonstrating the integration of routes, controllers, models, and views. 2. Build dynamic web pages using Blade templates with layout inheritance, components, and conditional logic. 3. Create and manage database tables using migrations and implement RESTful APIs with Laravel to handle CRUD operations. 4. Design and implement scalable and maintainable web application structures following best practices in Laravel development.	
Knowledge	Code	Description
	TPK22	Analyze and solve common web applications tasks by writing PHP programs
Skill	Code	Description
	TPC5.7	Using controllers and routes for APIs and URLs
	TPC5.8	Creating and using composer packages
	TPC5.9	Create restful services, use an Effect Dependency Array and how to hand errors in data requests

Unit Preface

المعرفة	الكود
Analyze and solve common web applications tasks by writing PHP programs	TPK22

Dear learner: Put "True" in front of the correct statement and "False" in front of the incorrect statement.

No	Question	Answer
	Laravel is a paid PHP framework.	
	Laravel follows the MVC architecture.	
	Laravel does not support built-in libraries.	
	Laravel provides built-in automated testing support.	
	MVC stands for Model, View, Controller.	
	Laravel does not enforce a separation between business logic and presentation.	
	Models in Laravel handle database interactions.	
	Views in Laravel are responsible for business logic.	
	Controllers act as an intermediary between Models and Views.	
	The default Laravel welcome page runs on http://localhost:8000.	
	The app/ folder contains frontend assets like CSS and JS.	
	Blade templates are stored in resources/views/.	
	The public/ folder is the entry point for Laravel applications.	
	Database configurations are stored in config/database.php.	
	The routes/ folder defines API and web routes.	
	All web routes are defined in routes/api.php.	
	Route parameters are defined using {} in Laravel.	
	Controllers are stored in app/Http/Controllers/.	
	The command php artisan make:controller creates a new controller.	

	Middleware can restrict access to routes.	
	Blade files use the .blade.php extension.	
	{{ \$variable }} escapes HTML by default.	
	Blade does not support loops and conditionals.	
	@yield is used to define a section in a layout.	
	@extends is used to inherit a layout.	
	Eloquent is Laravel's built-in ORM.	
	Migrations are used to modify database structure.	
	Factories generate fake data for testing.	
	Seeders populate the database with initial data.	
	Eloquent does not support relationships.	
	Laravel Breeze uses Bootstrap for styling.	
	CSRF protection is enabled by default in Laravel forms.	
	Policies are used for model-based authorization.	
	API resources format JSON responses.	
	Form validation in Laravel only checks for empty fields.	
	Flash messages persist across page refreshes.	
	Query Builder is an alternative to Eloquent for database queries.	
	Middleware cannot be used for authorization.	
	The php artisan route:list command displays all routes.	
	Blade layouts help avoid repeating HTML code.	

Dear learner: Choose the correct answer.

No	Question	Answer
	What is Laravel? a) A JavaScript framework b) A PHP framework c) A CSS library d) A database system	
	Which architecture does Laravel follow? a) MVP b) MVC c) MVVM d) Flux	
	What does Laravel's Eloquent ORM do? a) Handles HTTP requests b) Compiles CSS c) Manages database interactions d) Renders Blade templates	
	Which tool is used to manage Laravel dependencies? a) npm b) Composer c) Yarn d) Pip	
	What command starts the Laravel development server? a) php artisan start b) php artisan serve c) npm run dev d) composer serve	
	Where are web routes defined in Laravel? a) routes/api.php b) routes/console.php c) routes/web.php d) app/Http/routes.php	
	How do you create a controller in Laravel? a) php artisan create:controller b) php controller:make	

	c) php artisan new:controller d) php artisan make:controller	
	What is the purpose of middleware? a) Style web pages b) Filter HTTP requests c) Seed databases d) Generate fake data	
	Which method returns a view in Laravel? a) return view() b) return html() c) return blade() d) return render()	
	What does Route::resource() generate? a) A single route b) CRUD routes c) API endpoints d) Authentication routes	
	What is the extension for Blade files? a) .php b) .blade c) .blade.php d) .html.php	
	How do you escape output in Blade? a) {!! \$var !!} b) {{ \$var }} c) @escape(\$var) d) @{{ \$var }}	
	Which directive extends a layout in Blade? a) @include b) @extends c) @yield d) @section	
	How do you loop through an array in Blade? a) @for	

	b) @loop c) @while d) @foreach	
	What does @yield do in Blade? a) Includes a file b) Defines a section c) Outputs a variable d) Extends a layout	
	What are migrations used for? a) Storing session data b) Modifying database structure c) Rendering views d) Handling HTTP requests	
	Which command creates a migration? a) php artisan make:migration b) php artisan create:migration c) php artisan new:migration d) php migrate:make	
	What is the purpose of seeders? a) Generate fake data b) Define routes c) Create controllers d) Compile assets	
	Which relationship does hasMany() represent? a) One-to-One b) Polymorphic c) Many-to-Many d) One-to-Many	
	What is the default primary key in Eloquent? a) uuid b) id c) key d) primary	

	Which package provides Tailwind-based auth scaffolding? a) Laravel Breeze b) Laravel UI c) Laravel Jetstream d) Laravel Sanctum	
	What does the auth middleware do? a) Checks if a user is an admin b) Ensures a user is logged in c) Validates form data d) Hashes passwords	
	How is CSRF protection added to forms in Laravel? a) @protect b) @secure c) @form_token d) @csrf	
	Which command installs Laravel Breeze? a) composer require laravel/breeze b) npm install breeze c) php artisan install breeze d) composer create-project breeze	
	What is used to authorize user actions in Laravel? a) Policies b) Migrations c) Seeders d) Factories	

Give the Scientific Name Questions:

No	Question	Answer
	What design pattern does Laravel use to separate logic, UI, and processes?	
	Which Laravel tool helps manage packages and dependencies?	
	Which folder contains the main application code, such as models and controllers?	

	What is the name of Laravel's command-line tool for generating code and managing tasks?	
	What is the syntax used in Blade to output a variable safely?	
	What is the term for passing dynamic values into routes using curly braces?	
	Which Laravel feature interacts with databases using PHP classes instead of raw SQL?	
	What is the term for a gatekeeper that checks or modifies requests before they reach a route?	
	What is the term for version-controlled files that modify database tables?	
	Which tool generates fake data for testing in Laravel?	
	What is the term for classes that populate the database with initial or test data?	
	What type of relationship exists when one record in a table links to multiple records in another?	
	Which Laravel feature allows writing database queries using PHP instead of SQL?	
	What is the term for checking if submitted form data meets specific rules?	
	What is the temporary message shown after an action, like "Post Created!"?	
	What is Laravel's templating engine called?	
	Which directive in Blade is used to extend a layout?	
	What security feature prevents cross-site request forgery attacks in Laravel forms?	
	Which Laravel package provides Bootstrap-based authentication scaffolding?	

	What is the process of defining user permissions called?	
	Which Laravel feature is used for model-specific authorization rules?	
	What is the term for general authorization logic not tied to a model?	

Complete the Sentence Questions:

No	Question	Answer
	Laravel is a free and open-source PHP framework that follows the -----design pattern.	
	The ----- tool is used to manage Laravel's dependencies.	
	The ----- syntax in Blade safely outputs variables.	
	Route parameters are defined using -----in the URL.	
	----- acts as a gatekeeper for HTTP requests.	
	Database structure changes are managed using -----.	
	Fake data for testing is generated using -----.	
	The ----- class populates the database with initial data.	
	The ----- provides a fluent interface for database queries.	
	----- ensures user-submitted data meets specified rules.	
	A ----- appears temporarily after an action.	
	Blade layouts avoid code repetition using -----.	
	Laravel's ----- prevents cross-site request forgery attacks.	

Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	Eloquent ORM	A	A. Handles HTTP requests and returns responses	
2	Blade Templating	B	B. Manages database interactions using PHP classes	
3	3. Artisan CLI	C	C. Creates HTML templates with dynamic content	
4	Middleware	D	D. Filters HTTP requests before they reach controllers	
5	Migration	E	E. Generates code and manages Laravel apps via CLI	
6	Controller	F	F. Defines database table structure changes	

Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	app/	A	Stores CSS, JS, and images	
2	routes/	B	Contains database table definitions	
3	resources/views/	C	Holds models, controllers, and core logic	
4	public/	D	Defines application URLs and endpoints	
5	config/	E	Stores HTML templates (Blade files)	
6	database/migrations/	F	Contains app configuration files	

Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	GET	A	Create new data	
2	POST	B	Retrieve data	
3	PUT/PATCH	C	Delete data	

4	DELETE	D	Update data	
5	Laravel Breeze	E	Use Bootstrap 5	
6	Laravel UI	F	Use Tailwind CSS	

Match the correct answer from column A what suits column B

No	Column (A)	No.	Column (B)	Answer
1	@yield	A	Extends a layout	
2	@section	B	Includes another view	
3	@extends	C	Defines a placeholder in a layout	
4	@include	D	Outputs escaped data	
5	{{ }}	E	Defines a content block	
6	@if	F	Conditional rendering	

Dear Learner: Answer the following questions.

	Question	What is Laravel?
	Answer	
	Question	What does MVC stand for in Laravel?
	Answer	
	Question	What command starts a Laravel development server?
	Answer	
	Question	Where are Laravel routes defined?
	Answer	
	Question	What is Blade in Laravel?
	Answer	

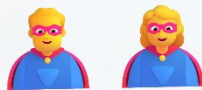

Dear Learner: Answer the following questions.

	Question	What is Eloquent ORM?
	Answer	
	Question	What is a migration in Laravel?
	Answer	
	Question	What is CSRF protection in Laravel?
	Answer	

NOTICE

If you come across a question that's been answered wrong, don't panic! Instead, be the hero we need and report it through this magical link.
